Product Data Analysis -Final Report

PRODUCT DATA ANALYSIS USING MICROSOFT EXCEL

1. Introduction

This project is based on Product Data Analysis using Microsoft Excel. The main objective is to organize, clean, analyze, and visualize product data.

2. Data Organization

I organized the product dataset into a table. The dataset contains Product ID, Product Name, Category, Subcategory, Brand, Cost, and Stock.

3. Data Cleaning

- Checked duplicate records.
- Identified and handled missing values.
- Corrected inconsistent category names.
- Organized and formatted the data.
- Checked product details and data accuracy.

4. Excel Formulas and Functions

I used the following Excel functions:

- SUM – To calculate total cost.
- COUNT – To count stock values.
- AVERAGE – To calculate average cost.
- MIN and MAX – To find minimum and maximum values.
- IF – To categorize price ranges.
- COUNTIF – To count category values.
- TEXT – To format numbers.
- VLOOKUP and XLOOKUP – To look up product details.

5. Statistical Analysis
I calculated:

- Mean
- Median
- Mode
- Standard Deviation

6. Pivot Table

I created a Pivot Table to summarize category-wise cost and stock details and used Brand as a filter.

7. Data Visualization

I created three charts:

1. Category-wise Cost Chart
2. Category-wise Stock Chart
3. Brand-wise Cost Chart

8. Dashboard

I created a Dashboard by arranging all three charts in one worksheet for easy understanding and comparison.

9. Data Validation

I applied Data Validation to the Stock column to allow only whole numbers greater than or equal to zero.

10. Conclusion

Through this project, I learned how to organize, clean, analyze, and visualize product data using Microsoft Excel. This assignment improved my Excel knowledge and data analysis skills
